

Care of Textile Materials with No Hotfix and Sew-on Stones

Textile products with No Hotfix Stones glued or sewed onto them are usually very sensitive to maintenance techniques and require careful handling.

Recommended cleaning techniques

It is therefore strongly recommended that if the need arises, they should only be washed by hand, using lukewarm water with a minimum amount of non-aggressive washing agents (detergents, washing agents designed for use with soft fabrics). Do not tumble dry or wring the washed products. Wrap them in a towel, gently squeeze the water out and then lay them out on an absorbent ground to dry (e.g. like woolen sweaters).

An alternative procedure can be selected only after a positive test result has been achieved with a proof sample.
